EDUCATION **University of Exeter**, Exeter, U.K

Ph.D., **Astrophysics**, *Expected*: July 2019

- Advisors: [Dr. Nathan Mayne](#) and [Prof. David Sing](#)
- Thesis : *Exoplanet Atmospheres* - PhD research involved developing 1D radiative-convective equilibrium models to interpret observations of exoplanet atmospheres. This involved developing opacity database for models, parameterising physical processes, testing the effects of different planetary properties on their observational spectral features. We developed a publicly available library of simulated observations [Atmospheric Library of Far Away Worlds](#) which has been used extensively to interpret and plan observations for various telescopes.
